Product Details

Austrorads, the peak body of Australasian road transport and traffic agencies, require new and existing road safety products to comply to the updated testing guidelines of AS/NZS3845.1 (2015) and AS/NZS3845.2 (2017). Road safety products must now be tested to the American Association of State Highway and Transport Officials (AASTO) 2009 Manual for Assessing Safety Hardware (MASH) guidelines. MASH testing supersedes NCHRP 350 testing for New Zealand road barrier products.

After extensive vehicle impact tests were undertaken on the Signfix and Optimast product ranges by a leading FHWA testing facility, the Signfix and Optimast product ranges are MASH compliant and approved by Austrorads Safety Barrier Assessment Panel (ASBAP) for use on the New Zealand road network.
