### Product Details

Compact Traffic Lights are an integral traffic management tool for use on roadwork sites. It is intended to be used as a temporary daily usable Traffic Light. It is powered by a maintenance free battery that needs to be recharged at the end of the day. It is not intended to be left unattended on site and when operated via an optional Remote Control it places a safe distance between the actual Traffic Light and the operator.

The entire unit is light weight and can be folded down and easily transported. The 200mm aspects use ultra-bright LED's for optimal viewing. If used as a set, the Compact PTLs maintain constant RF (radio frequency) communication with the each other, as required for MRTS264 Type-1 Portable Traffic Signals and TSI-SP-062,049, 050 and where relevant AS4191-2015 Portable Traffic Signals.

Normal RF operating range is up to 500 meters line-of-sight under normal conditions.

Features include lightweight foldable tripod stand that can be quickly set-up by one person.

Cross-compatible with Data Signs PTL Trailer units - use a combination of PTL Compact and PTL Trailer on your site!
